# Dinámica Secular y Resonante en Sistemas Planetarios o Las Resonancias después de las Resonancias

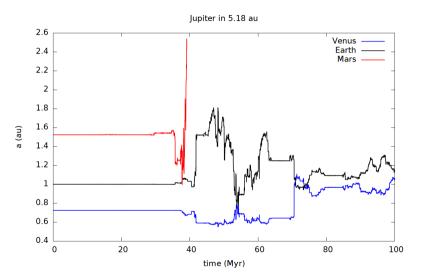

Proyecto CSIC I+D https://sites.google.com/view/udelarsistemasplanetarios/

Tabare Gallardo, Facultad de Ciencias, UdelaR, Uruguay

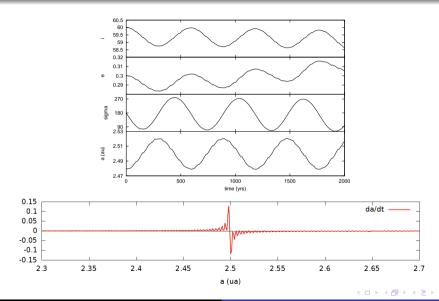

10 de Mayo de 2023

# Dinámica SECULAR + caótica

#### Dinámica RESONANTE

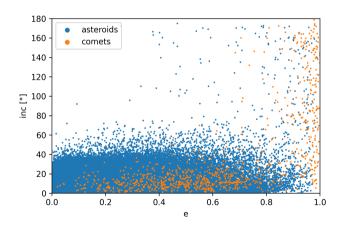

# Población objetivo

- dinámica de encuentros: caotica X
- dinámica secular: regular, semiejes constantes ✓
- dinámica resonante: todo oscila y evoluciona en grandes escalas de tiempo

Población objetivo: toda órbita excéntrica y/o inclinada de evolución continua

cuerpos menores (0 < a < 100 ua)

 ¿Cómo es la dinámica secular y resonante de cuerpos menores excéntricos y/o inclinados en el Sistema Solar?

#### exoplanetas

Eccentricity - Period Distribution

 ¿Cómo es la dinámica secular y resonante de sistemas planetarios excéntricos?

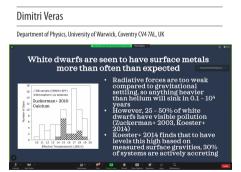

• ¿Por qué existen ciertas resonancias preferidas en los sistemas planetarios?

Beaugé and Ferraz-Mello, tbp

# Post-main-sequence planetary system evolution

• ¿Cómo es la dinámica secular y resonante de **cuerpos menores** en sistemas planetarios excéntricos?

Excitación de sistemas planetarios en la etapa post secuencia principal.

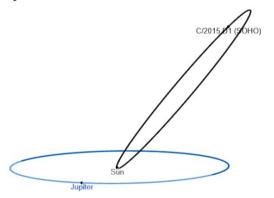

# ¿Por qué la obsesión con lo excéntrico?

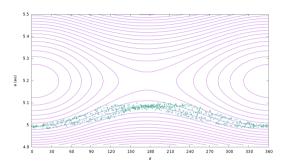

- porque las teorías planas y de baja e están excelentemente desarrolladas
- porque no existían **modelos** generales para resonancias
- ahora existen y son nuestros (Gallardo 2020 y GBG21)
- necesitan ser chequeados
- oportunidad para ser aplicado a todos los objetos que no fueron estudiados: cometas, sungrazers, Planeta 9, coorbitales excéntricos, extrasolares...

**MODELO:** expresión *H*, cálculo *R*, sistema de referencia y variables, solución.

# Ejemplo bizarro

C/2015 D1 en quasi-resonancia 1:1 con Jupiter

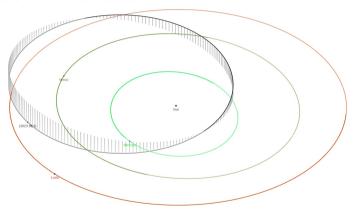

Hamiltoniano 1:1 (modelo G20), e integración numérica exacta del objeto.

#### 2023 BB1

#### 2023 BB1 en resonancia 1:1 con Venus

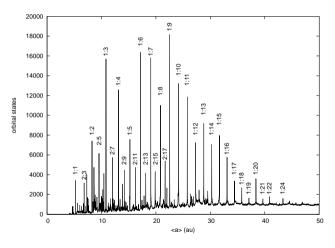

animacion

**©Nicolas** 

# Resonancias son populares entre partículas excéntricas

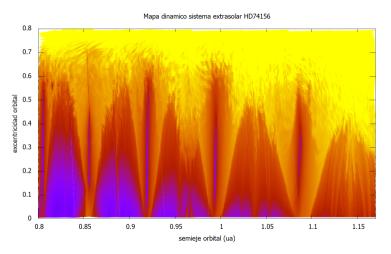

Histograma de estados orbitales medios de cometas:

Fernandez et al., 2016

#### Resonancias son anchas

#### Mapa dinámico para HD 74156

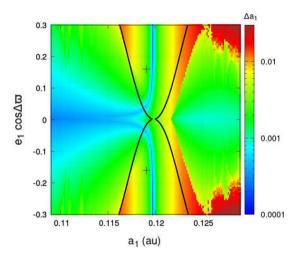

# Modelos válidos para alta excentricidad (e > 0.6)

	ASTEROIDAL	PLANETARIO
Secular	ZLK circular y excéntrico espacial	ZLK espacial (Naoz, De Elia) y caso plano aplicado a extrasolares (Beauge)
Resonante	G20 (Schubart, Ferraz- Mello, Moons)	GBG21
Secular resonante	caso plano (invariantes adiabaticos, Pons) o plan- eta circular (Saillenfest)	caso plano con amplitud de libracion 0 (Pons, Beust)

Desafío de modelos espaciales: muchas variables  $(\sigma, e, i, \varpi, \Omega)$ 

#### Limitaciones de nuestro modelo resonante

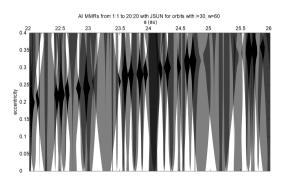

TOI-216 El modelo falla en las resonancias 2:1 y 3:2 cuando  $e \sim 0$  en caso plano (ley de estructura)

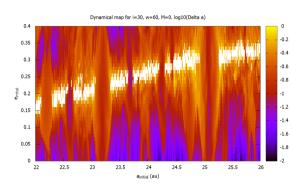

Giuppone et al. 2022

# Virtudes: modelo G20 versus mapa dinámico

#### Orbitas de i = 30 entre Urano y Neptuno:

# Integrantes

- Responsable: T. Gallardo
- Ayudantes: J. Pons (planetas) y XX o XY (cuerpos menores)
- Colaboradores: N. Pan (tesis resonancias), E. Viera (tesis Planeta9), A. Rodriguez,
- Potenciales colaboradores: sacrificados estudiantes
- Antecedentes: V. Romero (pasantia), J. Pons (Tesis), V. Abraham (In. Inv.), L. Badano (T. Esp.)...

#### Dinámica RESONANTE

#### **ASTEROIDAL:**

- teorías analíticas especificas para bajas
  e, i (libros de texto)
- teorías analíticas especificas para i arbitraria y e acotada (Morais, Lei)
- teoría semi-analitica general Gallardo (2020) valida para todo (???)

#### PLANETARIA:

- teorías analíticas especificas para caso plano y bajas *e* (Batygin, Morbidelli)
- teorías analíticas especificas para caso plano y arbitraria e (desarrollo de Beauge)
- teoría semi-analitica general GBG (2021) valida para todo (???)

Semi-analitica: formalismo Hamiltoniano pero la función perturbadora (R) es numérica.

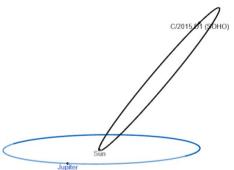

ver https://sites.google.com/view/mmresonances/home/literature

#### Dinámica SECULAR

- teorías analíticas para bajas e, i (Murray y Dermott)
- teorías semianaliticas para partículas arbitrarias con planetas circulares y coplanares (ZLK)
- teorías semianaliticas para caso plano (Beauge et al.)
  - ⇒ **teoría semianalitica general** (en desarrollo desde Gauss)

#### IDEA:

Modelo: elipses materiales que se perturban y deforman.

Ver Notas de Din. Orb. Sec. y Res.

#### Analítico versus semianalitico

 $\frac{1}{760}e^{5}a^{5}b|\frac{1}{2}$ , 5, 5|  $+\frac{477}{49}e^{5}s^{2}ab|\frac{1}{2}$ , 4, 8|  $+\frac{37}{16}e^{5}s^{2}a^{2}b|\frac{1}{2}$ , 4, 1|  $+\frac{3}{29}e^{5}s^{2}a^{3}b|\frac{1}{2}$ , # Metodología

- modelo semianalitico **resonante**: chequear, mejorar, aplicar (Tesis N. Pan)
- modelo semianalitico **resonante secular**: Tesis J. Pons, llevar al caso espacial (ZLK resonante)
- modelo semianalitico **secular**: tosco modelo a mejorar, aplicar
  - PROBLEMA: muchos grados de libertad (Tesis E. Viera)
- achatamiento, relatividad, mareas, evolución estelar?
- mapas dinámicos
- mapas de caos
- integraciones (evorb, REBOUND)

#### Resonancias del Planeta 9

Tesis E. Viera, en preparación

# Resonancia planetaria - caos - estabilidad

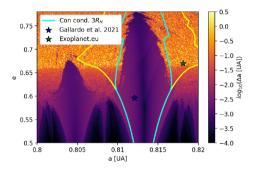

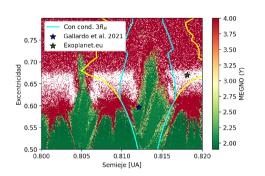

Fig. 7: Curvas teóricas de la resonancia 16:3 sobre el mapa dinámico. Notemos como los encuentros disminuyen la zona estable.

**Fig. 8:** Mapa de Caos construido con el indicador *MEGNO*. ⟨*Y*⟩ > 2 implica evolución caótica.

poster N. Pan, 2022

# Evolucion secular de resonancia planetaria

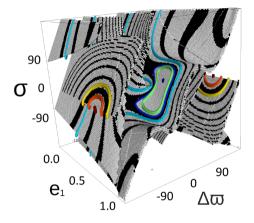

Figura 4.28: Superficie  $\mathcal{H}_1$  en la MMR 3:1 comparada con 7 integraciones numéricas (en colores) de 10 kyrs de un sistema con  $m_2/m_1 = 5$  y  $\mathcal{AM}_{norm} = 0.8$ .

Tesis J. Pons, 2022

# muchas gracias
